

Frontend Developer

all genders

IRUBIS

IRUBIS is a young, growing biotechnology company specialized in monitoring and control of bioprocesses. Our technology accelerates the development of drugs. We are looking for a Frontend developer for our innovative optical analyzer.

We use state of the art frameworks to build the best possible front end to provide our customers with information about their bioprocesses in the lab, in the office, at home and at any time. We are looking for a frontend developer that supports us with the implementation of a multi-platform framework, which is the basis of our UI. This includes the intuitive visualization of large data sets.

Your tasks

- Develop, maintain, and improve our current frontend
- Ensure that our complex data is presented to our users in the best possible way
- API design, architecture, data and state design
- Collaboration with backend software developers and data analysts

Your profile

- Experience with JavaScript, React and CSS, with one (or more) of the following: Electron, Redux, Plotly
- Strong skills in web based front-end development and ambitious to shape and build something new
- “Nice-to-have”: UI and UX skills, experience in visualization of scientific data, and basic skills in Python

What we offer

- Modern office space: centrally located in Munich
- Flexible working hours, a great team and flat hierarchies
- Partly remote work is possible
- Exciting personal development opportunities

Does all this sound interesting to you?

Then send us your curriculum vitae without a personal photo and working sample and salary expectation in a PDF document to you@irubis.com
