

# Systems administrator

all genders, full time

# IRUBIS

IRUBIS is a young, growing biotechnology start-up specialized in monitoring and control of bio-processes. Our technology accelerates the development of bio-pharmaceutical drugs.

We are building a state-of-the-art system to provide our biopharma customers with information about their bioprocesses in the lab, in the office, at home and at any time. We process spectroscopic data to provide them with sophisticated data models. You will examine thoroughly our information rich multivariate spectroscopic data sets. From the findings you derive algorithms that improve our measurement results.

Apply to IRUBIS and be part of a great team that aims to revolutionize the way biopharmaceuticals are produced.

## Your tasks

- Maintaining internal company network infrastructure (i.e. Servers, VPN)
- Securing IT infrastructure
- Managing internal company cloud system and services (Setting up user access control rules, password management etc.)
- Securing and managing the operating systems of our products (devices)
